NeuroBo Pharmaceuticals to Participate in Investor Conferences in November

November 13, 2024

CAMBRIDGE, Mass., Nov. 13, 2024 /PRNewswire/ -- **NeuroBo Pharmaceuticals, Inc.** (Nasdaq: NRBO), a clinical-stage biotechnology company focused on transforming cardiometabolic diseases, today announced participation in the following investor conferences in November:

- November 14: **Life Science Virtual Investor Forum.** Hyung Heon Kim, President and Chief Executive Officer and Marshall H. Woodworth, Chief Financial Officer, will present a company overview on Thursday, November 14, at 1:00 pm ET. Management will also be available for one-on-one meetings during the event. Interested parties who would like to listen to the Company's presentation or request a meeting can do so after registering for the conference at https://www.virtualinvestorconferences.com/events/event-details/life-sciences-investor-forum-6.
- November 21: **Winter 2024 Investor Summit Virtual.** Mr. Kim and Mr. Woodworth will present a company overview on Thursday, November 21, at 11:00 am ET, at this virtual summit. To listen to the presentation or to schedule one-on-one meetings, interested parties can register at: https://www.webcaster4.com/Webcast/Page/3075/51588.

To schedule a meeting with management outside of these events, investors can contact Michael Miller at mmiller@rxir.com.

About NeuroBo Pharmaceuticals

NeuroBo Pharmaceuticals, Inc. is a clinical-stage biotechnology company focused on transforming cardiometabolic diseases. The company is currently developing DA-1726 for the treatment of obesity, and is developing DA-1241 for the treatment of Metabolic Dysfunction-Associated Steatohepatitis (MASH). DA-1726 is a novel oxyntomodulin (OXM) analogue that functions as a glucagon-like peptide-1 receptor (GLP1R) and glucagon receptor (GCGR) dual agonist. OXM is a naturally-occurring gut hormone that activates GLP1R and GCGR, thereby decreasing food intake while increasing energy expenditure, thus potentially resulting in superior body weight loss compared to selective GLP1R agonists. DA-1241 is a novel G-protein-coupled receptor 119 (GPR119) agonist that promotes the release of key gut peptides GLP-1, GIP, and PYY. In pre-clinical studies, DA-1241 demonstrated a positive effect on liver inflammation, lipid metabolism, weight loss, and glucose metabolism, reducing hepatic steatosis, hepatic inflammation, and liver fibrosis, while also improving glucose control.
